RFI TITLE: Construction Joint Layout for AB Beams										
REFERENCE:										
CONTRACTOR'S REQUEST										
The following information, interpretation, or clarification is requested as described below or in the attachments.										
Baker proposes to install construction joints in the CIP beams per the attached layout drawing. Is this acceptable?										
By: John Jacob Date: 1/17/11										
ENGINEER'S RESPONSE										
The following information, interpretation, or clarification is provided as described below or in the attachments.										
The beam construction joint layout plan provided as an attachment to RFI #004 does not appear to be applicable based upon the rebar submittal response being provided for the digester and aeration basins. The beam construction joint layout as proposed on the RFI indicates the beams will be placed at the center of the wall with a blockout being placed at that wall intersection. A new layout based on the rebar submittal response indicates ell bars will be extended out of the walls and the beams poured against the wall. Please reference the rebar response submittal.
